

# Septic System Expedited Permitting Options

Onsite wastewater system applications are processed on a **first come, first serve basis**. You may expedite your application using any of these options:

## Option 1 - (1-5 Business Days)

Applicant may hire both a Professional Soil Classifier and Licensed Professional Engineer to evaluate their site and design a system standard under Regulation 61-56. Visit [www.llr.sc.gov/soil/PDF/SoilRoster.pdf](http://www.llr.sc.gov/soil/PDF/SoilRoster.pdf) to find a Professional Soil Classifier and Licensed Professional Engineer.

## Option 2 - (5-10 Business Days)

Applicant may hire a Professional Soil Classifier to conduct a soil evaluation on their site. The applicant will then submit an application and a certified soil report from the Professional Soil Classifier. The Professional Soil Classifier will also need to complete DHEC form 3269 – *Soil Report Verification* which should be submitted with the application. This form can be obtained from your local Environmental Affairs office.

## Option 3 - (By Appointment)

Applicant may supply backhoe pits at time of initial visit in areas where pits are requested frequently. The applicant should schedule a time with an OSWW inspector for test pit evaluation.

**Please note:** Weather conditions may affect processing times for **Option 2** and **Option 3** as saturated soil conditions will negatively impact soil evaluations.
